

NEWS

Student Early Childhood Education (ECE) program recently visited to one of the early childhood schools here.

The aim of this program is to foster creativity and enhance high-order thinking skills to improve student performance. It also involves evaluating early childhood settings, curriculum, and teaching strategies to ensure high-quality early childhood education that supports all children, including those with diverse characteristics.

This program is a great opportunity for future educators. It equips students with the knowledge and skills to guide children through their developmental journey, nurture their creativity, and help them become critical thinkers. With a focus on inclusivity and quality education, graduates will be well-prepared to make a positive impact on children's lives and in the field of education.

This special program is designed to help students learn about children's development, encourage their creativity, and foster high-order thinking skills.

Based on this program also, students will learn how to develop the skills and track the milestones of children, gaining a general understanding of the changes to expect as a child grows.
