

Shaping Minds Through Debate

At I-Systems, nursing students develop core competencies through the three C's of learning: critical thinking, creativity, and collaboration.

Debate participation plays a key role by enhancing students' problem-solving abilities and fostering innovative thinking – learning to analyse complex information, think creatively, and synthesise diverse perspectives into clear, well-supported positions that effectively bridge theory with practical application.

Debating also provides a dynamic and constructive platform for exploring real-world and often controversial topics, while nurturing essential skills such as leadership, teamwork, persuasive communication, critical thinking, and public speaking. These experiences not only enrich academic learning but also equip nursing students with vital life and professional skills.
